

# BEST KEPT SECRET IN GOLF

SERVING GOLF COURSE SUPERINTENDENTS SINCE 1994

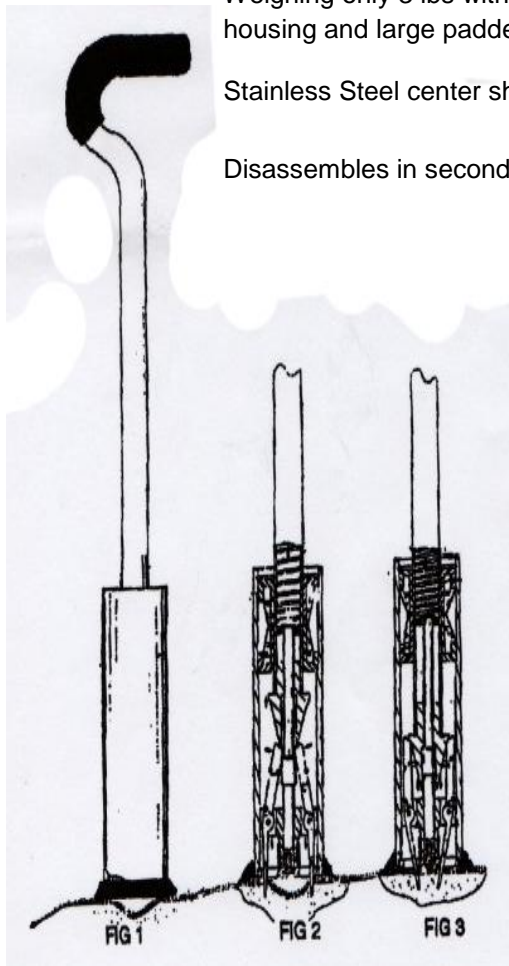

**A BALL MARK REPAIR TOOL THAT  
REALLY WORKS**

## **KNO-MARKS** **BALL MARK REPAIR TOOL**

**For a Video Demonstration go to**

**[www.knomarks.com](http://www.knomarks.com)**

Make cleaning up Ball Marks easier and faster than ever

Weighing only 3 lbs with strong painted aluminum housing and large padded handle.

Stainless Steel center shaft, bolts, springs & fingers.

Disassembles in seconds for easy maintenance.

To properly repair a ball mark the soil and roots should be returned as close as possible to their original position.

Obviously this requires returning more soil from the bottom upward while the perimeter area is moved inward. The **KNO-MARKS** tool has been designed with these goals in mind, yet operates with a simple single down ward motion.

When placed over a ball mark the **KNO-MARKS** will first penetrate its 5 stainless steel fingers straight into the soil to a pre determined depth (fig 2). Then the dual action cam will cause the fingers to pivot inward forcing the soil back to where it belongs. (fig. 3).

As the handle is lifted the cam releases the fingers which return back into the housing (fig. 1) leaving a small hump which should be gently stepped down.
